INDUSTRY

Food processing industry

In the design and implementation of its solutions in cold and air treatment, **Paumier** integrates the specificities of the food processing industry.

- **Refrigeration production design tailored to your process**

- Low-load refrigerant production and distribution installations (direct expansion down to -60°C , ammonia plants) and/or all-temperature refrigerant (MEG, MPG, Temper, Calcium Chloride...)
- Freezing tunnels all temperatures
- Air Handling Units
- Installation of cooling towers and water treatment system

- **Study and management of retrofits**

- Proposals for tailored solutions : cost, power, time and compliance with regulations, replacement of halogenated fluids

- **Control and management of all types of atmospheres**

- Treatment and distribution of air by filtration, purification, pressurization, diffusion, cooling, heating, dehumidification, humidification of your work areas, clean rooms, production lines
- Setting up of intelligent and autonomous installations
- Automation of cold production and distribution facilities (monitoring, recording and traceability of temperatures, alarm and energy management, remote maintenance)

- **Installations compliance according to the evolution of European standards**
