

## ATEX SOLUTIONS

The autonomous ATEX cooling systems that are manufactured by Paumier Industrie are designed to operate in very sensitive environments.

### Specialist in manufacturing procedures for custom equipment

Paumier Industrie masters the specific procedures for manufacturing those custom equipments that are classified upon the following criteria :

- ✓ 1, 2, 21, 22 areas: occasional and/or rare presence of gases and dusts
- ✓ Gas groups: all groups from I to IIC (methane, propane, ethylene, hydrogen, acetylene...)
- ✓ Temperature class: from T1 to T3 (450°C to 200°C)

Paumier ATEX air conditioners are especially recommended for cooling cabins, analyzer shelters and storage silos in all types of explosible atmospheres.

According to the customer's needs, custom design allows a high-degree of modularity and different options: dimensions, performance, refrigerant choice, layout (split, mono, multi-workstation, horizontal, vertical), frame type, electrical equipment, surface treatment...

#### Legislation

Installations in compliance with the directive 2014/34/UE
