

INDUSTRIAL REFRIGERATION

Control and regulation of temperature.

Paumier Industrie ensures **study, design, realization and maintenance** of your equipments including **training of your staff**.

Paumier Industrie conceives and carries out installations that integrate your process while taking into account your safety, hygiene and traceability constraints.

Temperature control and maintenance of all types of food and products :

- ✓ Design and realization of all temperature cold production distribution installations (refrigerants and/or coolants).
- ✓ Air distribution through coolers, textile ducts, and washable stainless steel units, simple and high efficiency filtration.
- ✓ Creation of turnkey cold rooms (insulated panels, all types of doors...).
- ✓ Automation of installations, temperature recording and traceability, alarm and energy management, telemaintenance.

Design of air handling systems for controlled-atmosphere rooms :

- ✓ Filtration
- ✓ Pressurization
- ✓ Deshumidification
- ✓ Air humidification

Realization of custom and turnkey installation :

- ✓ Made to measure construction of refrigerating groups and air treatment units.
Realization of piping, automatism, electricity and regulation works.
- ✓ Refrigerating equipments responding to the ATEX 94/9/EC directive.
